ABOUT ME

I'm an advanced Computer Programming student with a solid foundation in algorithms, database design, and networking. I excel at applying clean architectures and containerized environments. I am passionate about building end-to-end solutions: from designing robust backend APIs to implementing well-typed, fluid user interfaces.

PROJECTS

BookLibre

2026

- Engineered a full-stack book-sharing platform utilizing **Kotlin, Spring Boot, React, and PostgreSQL**, structured with robust Domain-Driven Design (DDD) principles.
- Architected 'BiblioKarma', a complex gamified scoring engine that dynamically calculates user reputation based on polymorphic book types, page counts, and time-based reservation rules.
- Optimized database performance and data retrieval by writing native PostgreSQL functions, views, and triggers, managing schema evolution through **Flyway** migrations.
- Developed a stateless, Role-Based Access Control (RBAC) security layer using custom **JWT authentication**, and integrated Spring @Scheduled tasks for automated reservation lifecycle management.

SQLify

2025

- Developed a full-stack application using **React, TypeScript, Node.js, Express, and MySQL** that translates natural language questions into executable SQL.
- Integrated **Google Gemini AI** to dynamically parse user inputs and generate complex SQL queries against a comprehensive Spotify-like relational database schema.
- Implemented robust error handling, SQL string normalization, and security measures (read-only execution) within the API controller to safely execute and return database results.

EXPERIENCE

AutoCAD Electrical Drafter

Argentina

M-Electrica

Aug 2022 - Present

- Elaborated comprehensive blueprints for over 50+ residential and commercial buildings, managing structural details and technical specifications.
- Designed topographic layouts of electrical panels, ensuring 100% compliance with current safety regulations and proper component distribution.
- Conducted technical tracking of documentation to guarantee that on-site execution perfectly matched the approved project scope.

SKILLS

Frontend: React, Svelte, TypeScript, JavaScript, Tailwind CSS, Material UI, Chakra UI, HTML5, CSS3

Backend & DB: Kotlin (Spring Boot), Java, Node.js, NestJS, C, C++, Python, PostgreSQL, MySQL, MongoDB, GraphQL, Redis

DevOps & Tools: Docker Compose, Git, GitHub, Postman, GNS3, Linux, Trello, Notion

AI Integration: Advanced Prompt Engineering (ChatGPT, Claude, GitHub Copilot, Antigravity)

EDUCATION

UNSAM (Universidad Nacional de San Martín), Argentina

Mar 2023 - Jul 2026

Associate Degree in Computer Programming

Coderhouse, Argentina

Graduated 2023

Full Stack Developer
